PROPERTY

SAMPLE DATE

RESULTS

The water sample collected from your well/spring by the contractor for Mass Merchandisers, Inc., was recently analyzed for detectable levels of volatile and semi-volatile organic priority pollutants such as benzene, naphthalene, and pentachlorophenol. Laboratory analyses indicate that these compounds were not detected in your water on the date of sampling. EPA has reviewed the data and agrees with the findings.

A copy of the laboratory analyses for the samples taken from your property is attached. Please note that these analyses do not include bacterial levels and additional sampling would be needed to determine if the water is safe to use.
